Kombucha is fermented sweetened tea, and tea quality genuinely matters to the result. Here is a careful beginner method with the safety points stated clearly. This sits in the tea making cluster beside [cold brew](#).

Home fermentation carries hygiene and safety considerations. Follow a trusted, detailed food safety source and stop if anything looks or smells wrong. This is an overview, not a substitute for careful technique.

What kombucha is

Sweetened tea fermented by a SCOBY (a culture of bacteria and yeast), producing a tangy, lightly fizzy, low sugar drink over one to two weeks.

The tea base matters

Plain black or green tea is standard and ferments reliably; the culture feeds on the tea and sugar. Flavoured teas with oils can harm the SCOBY, so flavour after fermenting, not during, see [black](#) and [green tea](#).

Core ingredients

Strong sweetened tea (the sugar feeds the culture, not you), a healthy SCOBY, starter liquid, clean equipment. The sugar is largely consumed by fermentation.

The outline method

Brew strong sweet tea, cool fully, add SCOBY and starter, cover with breathable cloth, ferment 7 to 14 days at room temperature out of direct sun, taste, then bottle (optional second ferment for fizz).

Hygiene and safety

Scrupulously clean equipment, never metal that reacts, correct acidity, and discard if mould appears or it smells wrong. This is the part to take seriously, not improvise, see the cautious note above.

Flavouring

Add fruit, ginger or herbs at the second ferment, after the tea fermentation, to protect the culture and control sweetness, see [sugar](#).

Bottom line

Kombucha is fermented sweet tea on a plain black or green base, made with a healthy SCOBY and careful hygiene; respect the safety basics and the tea base, see [cold brew](#).

A note on safety

Two points beyond hygiene. The second ferment builds carbonation in a sealed bottle, so never seal a vigorously active batch carelessly: trapped gas in glass is a genuine pressure hazard, so release pressure regularly. And home brewing is not for everyone: if you are pregnant, immunocompromised, or managing a condition where fermented or acidic foods are a concern, treat it as a clinician question, or simply buy a good commercial kombucha, which carries a safety margin a kitchen cannot match. If any batch looks or smells wrong, discard it untasted.
