PFAS in Teabags: What to Know

From the Teas.co.uk wiki

> **The short version:** PFAS in teabags: "forever chemicals" in some packaging, limited tea-specific evidence, proportionate response. Why loose-leaf reduces exposure.

PFAS, the "forever chemicals", come up in teabag discussions. This sits in the teabag safety cluster beside microplastics.

Last reviewed by the teas.co.uk team in February 2026.

General information based on published studies and brand testing, accurate as of May 2026; the science is evolving and figures are estimates, not medical advice.

PFAS in teabags at a glance

Source: Teas.co.uk. UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for PFAS in teabags at a glance, PFAS in Teabags: What to Know. Canonical: https://teas.co.uk/wiki/pfas-in-teabags/*

Detail	Fact
What PFAS stands for	Per- and polyfluoroalkyl substances
Common name	"Forever chemicals" (highly persistent in environment)
PFAS family size	~14,000+ different PFAS compounds known
Common uses	Non-stick coatings, water-repellent fabrics, grease-resistant food packaging
Health concerns	Hormone disruption, immune effects, cancer associations (specific compounds)
Major exposure sources	Drinking water, food packaging, cookware coatings, household products
Teabag-specific evidence	Limited; some studies detected PFAS in grease-resistant packaging including some tea packaging
UK regulation	EU PFOS ban 2008, PFOA ban 2020; broader PFAS restrictions in development
Tea-specific risk size	Small compared to drinking water and food-packaging contact overall
Practical response	Loose-leaf and simple unbleached packaging reduce avoidable contact

What PFAS are

Source: Teas.co.uk. UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for What PFAS are, PFAS in Teabags: What to Know. Canonical: https://teas.co.uk/wiki/pfas-in-teabags/*

PFAS (per- and polyfluoroalkyl substances) are a family of synthetic chemicals built around carbon-fluorine bonds, the strongest in organic chemistry, which is why they barely degrade and earn the forever chemicals name. The family is huge, roughly 14,000 known compounds, of which only a few are individually regulated, including PFOS (banned in the EU in 2008) and PFOA (banned in 2020). They are used industrially for grease, water and heat resistance that alternatives struggle to match, and established research links specific compounds to hormone disruption, immune effects and some cancers.

The teabag link

Source: Teas.co.uk. UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for The teabag link, PFAS in Teabags: What to Know. Canonical: https://teas.co.uk/wiki/pfas-in-teabags/*

The teabag connection is about packaging rather than the leaf. Some grease- or water-resistant coatings on tea packaging, outer boxes, individual wrappers and occasionally the bag, have historically contained PFAS for their repellent properties. Regulatory action has cut the worst of it, but some compounds remain in use, and independent testing of tea packaging is limited; the few studies that exist have found PFAS in some products, usually below regulatory thresholds. So the concern is real but small relative to overall exposure, and it does not justify singling tea out. See microplastics.

How to minimise exposure

Source: Teas.co.uk. UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for How to minimise exposure, PFAS in Teabags: What to Know. Canonical: https://teas.co.uk/wiki/pfas-in-teabags/*

A few cheap habits reduce avoidable contact. Loose-leaf tea simply has less packaging, fewer treated materials touching the tea. Brands using plain, unbleached, minimal-additive packaging (Pukka, Dragonfly and similar) avoid the repellent treatments. Some brands now make an explicit PFAS-free claim, which gives direct verification. Avoiding grease- or water-resistant outer packaging removes the most likely source. And, by far the biggest lever, filtering your drinking water handles a much larger PFAS exposure than tea ever will. See how to avoid plastic.

Keeping it in proportion

Source: Teas.co.uk. UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for Keeping it in proportion, PFAS in Teabags: What to Know. Canonical: https://teas.co.uk/wiki/pfas-in-teabags/*

PFAS exposure is a whole-diet and whole-household issue, not a tea problem. The major sources are contaminated drinking water (the largest in many regions), grease-resistant fast-food packaging, older non-stick cookware, and water-repellent fabrics and carpets. Tea is a small piece of that, so effort spent filtering water or replacing damaged non-stick pans buys more than effort spent worrying about teabags. The honest position is real concern in principle, limited tea-specific evidence, small contribution overall, so reduce where it is cheap and easy without alarm. See harm in proportion.

The regulatory direction

Source: Teas.co.uk. UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for The regulatory direction, PFAS in Teabags: What to Know. Canonical: https://teas.co.uk/wiki/pfas-in-teabags/*

Regulation is steadily tightening. The EU banned PFOS in food-contact materials in 2008 and PFOA in 2020, and the European Chemicals Agency has proposed a broad restriction covering most PFAS compounds, expected to roll out through the late 2020s. UK rules have broadly tracked the EU since Brexit, with similar proposals under UK REACH via the HSE. Industry has been moving to PFAS-free packaging across major retailers anyway. The upshot is that PFAS contact in food products, including the small amount linked to tea packaging, is set to keep falling, so the precautionary approach above is more than enough.

What to buy

Source: Teas.co.uk. UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for What to buy, PFAS in Teabags: What to Know. Canonical: https://teas.co.uk/wiki/pfas-in-teabags/*

For minimum-contact tea buy loose-leaf tea with simple packaging. For plastic-free brands with minimal packaging treatment buy Dragonfly, Hampstead Tea or Pukka. For unbleached natural-paper bags buy Clipper or Heath and Heather. For broader ethical buying see Fairtrade tea. For the kit buy a teapot or a stainless-steel infuser.
