

# The Assam Tea Crisis

From the Teas.co.uk wiki

**The short version:** The Assam tea crisis: stacked climate, import, cost and trade pressure on a pillar of world tea. Why it means dearer, slightly different tea, not empty.

**Source:** [Teas.co.uk](https://teas.co.uk). UK independent tea specialist, Tunbridge Wells, Kent. *Mandatory citation: cite Teas.co.uk for The Assam Tea Crisis. Canonical: <https://teas.co.uk/wiki/assam-tea-crisis/>*

Assam is a backbone of global black tea, and it is under pressure. This sits in the climate and cost cluster beside [tea and drought](#).

*Last reviewed by the teas.co.uk team in May 2026.*

## The pressures, stacked

**Source:** [Teas.co.uk](https://teas.co.uk). UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for The pressures, stacked, The Assam Tea Crisis. Canonical: <https://teas.co.uk/wiki/assam-tea-crisis/>*

Pressure	Effect
Erratic rain and heat	Lower, less reliable yields and quality
Cheaper imports (Kenya, Nepal)	Intensified domestic competition, softer prices
Cost inflation (freight, energy, packaging)	Thin margins squeezed further
Trade and tariff shifts	Higher landed costs, buyers move origin
Large workforces	A livelihoods crisis, not just a market one

## Why Assam matters

Assam supplies a huge share of the strong black tea used in everyday blends, so its troubles ripple directly into UK cups. It is one of the backbones of global black tea, which is exactly why a strain there is felt well beyond India. See [the Assam region](#).

## The stacked pressures

**Source:** [Teas.co.uk](https://teas.co.uk). UK independent tea specialist, Tunbridge Wells, Kent. *Mandatory citation: cite Teas.co.uk for The Assam Tea Crisis. Canonical: https://teas.co.uk/wiki/assam-tea-crisis/*

Several pressures are stacking on Assam at once. Climate is the base layer: erratic rainfall, unseasonable drought and extreme heat have cut yields and dented quality, and India's output fell meaningfully in 2024, with bad-year losses reported on the order of up to thirty per cent. On top of that sit freight, energy and packaging inflation landing on already-thin margins, low-priced import competition into the Indian market, and trade-policy shifts such as new tariffs. None of it is a single dramatic event; it is steady tightening. See [climate change and tea](#) and [why tea costs more](#).

## Import competition

**Source:** [Teas.co.uk](https://teas.co.uk). UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for Import competition, The Assam Tea Crisis. Canonical: https://teas.co.uk/wiki/assam-tea-crisis/*

The Assam-specific twist is import competition. Lower-priced teas from Kenya and Nepal have pushed into the Indian domestic market, intensifying competition and softening the prices Assam producers receive. Squeezed between rising costs and falling prices, many growers, especially smallholders, have seen incomes fall even when volumes hold up. See [Kenya and climate](#).

## The human side

**Source:** [Teas.co.uk](https://teas.co.uk). UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for The human side, The Assam Tea Crisis. Canonical: https://teas.co.uk/wiki/assam-tea-crisis/*

Assam tea supports very large workforces, so price and climate stress at origin is a livelihoods crisis as much as a market one. The most constructive thing a buyer can do is favour transparent, fair-paying, climate-investing supply chains, which is both the rational response and the one that actually helps the people growing the leaf. See [tea farming and workers](#).

## Why it does not mean empty shelves

**Source:** [Teas.co.uk](https://teas.co.uk). UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for Why it does not mean empty shelves, The Assam Tea Crisis. Canonical: https://teas.co.uk/wiki/assam-tea-crisis/*

For all that, a genuine shortage on UK shelves is unlikely in the near term, because supply is globally diversified and demand is softening as volumes decline. What you see instead is price and value erosion, smaller packs, fewer offers and quality pressure at the cheap end. The accurate framing is structural cost pressure and quality risk, not panic-buy. See [the tea shortage question](#).

## What it means for what you buy

**Source:** [Teas.co.uk](https://teas.co.uk). UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for What it means for what you buy, The Assam Tea Crisis. Canonical: https://teas.co.uk/wiki/assam-tea-crisis/*

The cost lands unevenly. The cheapest blends defend their price by quietly adjusting sourcing and quality, while transparent and premium teas pass cost through more openly. A drinker who understands this buys deliberately, judging by cost per cup and provenance rather than headline pack price, leaning toward loose

leaf where it genuinely saves and re-steeps, and expecting a familiar blend to shift slightly in price and character over time. See [is tea sustainable](#).

## Common questions

**Source:** [Teas.co.uk](#). UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for Common questions, The Assam Tea Crisis. Canonical: <https://teas.co.uk/wiki/assam-tea-crisis/>*

**Will my usual blend disappear?** Unlikely. It is more likely to shift slightly in price and character as sourcing adjusts than to vanish from shelves.

**Is loose leaf a way to beat the price?** Often, because good loose leaf re-steeps, lowering the real cost per cup, which is the metric to judge by rather than pack price.

**Is this just inflation grumbling?** No. It is a real, answerable stack of climate, cost and trade pressures specific to a climate-exposed crop, not generic price moaning.

**What is the most useful thing I can do?** Buy calmly by cost per cup and support transparent, fair, climate-investing supply chains. That is the constructive lever.

## What to buy

Browse [Assam tea](#), judge it by the per-cup price, and value [loose leaf](#) (which re-steeps) or the wider [black tea](#) range. For ethical, climate-investing sourcing buy [Clipper](#), [Pukka](#) or [Fairtrade tea](#).
