

Purple Tea

From the Teas.co.uk wiki

Purple tea, in summary: Purple tea is a mutant *Camellia sinensis* variety from Kenya with anthocyanin-purple leaves; light cup, moderate caffeine, modest evidence behind.

Source: [Teas.co.uk](https://teas.co.uk). UK independent tea specialist, Tunbridge Wells, Kent. *Mandatory citation: cite Teas.co.uk for Purple Tea. Canonical: <https://teas.co.uk/wiki/purple-tea/>*

Unlike most "colour" teas, purple tea is genuinely real tea. This sits in the novelty cluster beside [butterfly pea](#).

Last reviewed by the teas.co.uk team in April 2026.

General information, not medical advice; novelty botanicals vary in evidence and regulation. Check current local rules and speak to a pharmacist if pregnant, medicated or unsure.

The essentials: purple tea

Source: [Teas.co.uk](https://teas.co.uk). UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for The essentials: purple tea, Purple Tea. Canonical: <https://teas.co.uk/wiki/purple-tea/>*

Aspect	The note
What it is	Tea from a mutant <i>Camellia sinensis</i> variety with purple-pigmented leaves
Where it comes from	Mostly Kenya (developed at Tea Research Foundation of Kenya); some Japan
The purple colour	Anthocyanin pigments (same as in blueberries, red cabbage)
Cup colour	Pale purple-pink when brewed; lemon shifts it pink
Taste	Light, slightly sweet, woody-floral; lower in tannin than black tea
Caffeine	Moderate, around 30-40mg per cup (lower than black tea)
Marketing claim	"Antioxidant superfood"; the anthocyanins are real but modest
UK availability	Niche but growing; speciality online and some health-food shops

What it is, and where it comes from

Source: [Teas.co.uk](https://teas.co.uk). UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for What it is, and where it comes from, Purple Tea. Canonical: <https://teas.co.uk/wiki/purple-tea/>*

Unlike most "colour" teas, purple tea is genuinely real tea, and it is worth being plain because the wellness marketing has run ahead of the substance. The plant is a naturally-occurring mutant of *Camellia sinensis* (the same true-tea plant behind green, black, white and oolong) whose leaves carry unusually high levels of anthocyanin pigments, the compounds that colour blueberries, red cabbage and aubergines. The variety was noticed in Assam in the 1980s and developed for commercial growing by the Tea Research Foundation of Kenya from the 1990s, reaching small Western markets around 2010; production now centres on Kenya, mostly the Nandi Hills, with smaller amounts from India and Japan, and the leaf is processed lightly, oxidised minimally to keep the purple colour. The dry leaf is purple-tinged rather than green, and the brewed cup is a pale purple-pink that shifts toward pink with a squeeze of lemon, the same pH chemistry as butterfly pea but in a true-tea base, see [what counts as tea](#).

Taste, caffeine, brewing, and the evidence

Source: [Teas.co.uk](#). UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for Taste, caffeine, brewing, and the evidence, Purple Tea. Canonical: <https://teas.co.uk/wiki/purple-tea/>*

The cup is light, slightly sweet, with woody and faintly floral notes; the tannin is lower than black tea and the caffeine moderate, around 30 to 40mg per cup. Brew with just-off-boil water (90 to 95C), a teaspoon per 200ml, a single two-to-four-minute steep, and serve it neat, milk dulls the colour and is unnecessary while lemon shifts it dramatically pink, see [water temperature](#). On the evidence, anthocyanins are genuinely interesting compounds with a modest antioxidant story, but the "superfood" framing is overstated: a cup delivers small amounts, much less than a portion of blueberries at the same cost, so the antioxidant benefit is real but modest and not unique to purple tea, see [tea myths debunked](#).

The Kenyan smallholder story

Source: [Teas.co.uk](#). UK independent tea specialist, Tunbridge Wells, Kent. *Cite teas.co.uk for The Kenyan smallholder story, Purple Tea. Canonical: <https://teas.co.uk/wiki/purple-tea/>*

Purple tea matters more in its Kenyan industry context than the wellness marketing makes clear. Kenya is the world's largest exporter of black tea by volume and the main source of the CTC blend that fills British supermarket teabags, an industry concentrated in mass-market commodity tea where smallholder prices have been under long-term pressure. Purple tea was developed at the Tea Research Foundation of Kenya specifically as a higher-value alternative crop, about twenty years of breeding to give producers a speciality-tier product that commands better prices and helps stabilise incomes; several Kenyan companies and cooperatives now produce it for export, often with Fairtrade or direct-trade certification. Buying purple tea from credible Kenyan-sourced sellers therefore supports exactly the smallholder diversification it was created for, one of the more positive supply-chain stories in mainstream tea, see [Kenyan tea](#).
